Land slide

Introduction:

A land slide is ~~known as~~ several forms of mass movement, which is a general term for the movement of rocks & that caused a ~~pro~~ wide range of ground movements. It makes people who lived in the mountain areas live in danger.

Body

1. ~~Land~~ land slides are ~~most~~ mostly appears in the mountain area, which is the ~~south~~ South West in our country.
2. Land slides are mainly caused by long term heavy rain, the meltwater caused by ~~the~~ extreme ~~temperature~~ temperature. As the steep slope was flooded by water, the ground may move and caused the land slide. Meanwhile, the ~~the~~ deforestation, cultivation and construction is also a major fact.
3. Land slide may cause an earthquake or a ~~tsunami~~ tsunami. While significant rockfall or violence collapsed into the sea it may cause tsunami.

Conclusion:

Because of the enormous damage of ~~the~~ it cause, people always stay alert and plan a evacuation routes.
